JPI Climate in Estonia

CONTENT

1. Polar research – past and future
2. Estonia's place on the global polar research landscape
3. ESTPOLAR programme strategic objectives
4. Vision – Estonian polar research in 2020
5. BRIEF DESCRIPTIONS OF ESTONIAN CURRENT AND PLANNED POLAR RESEARCH DIRECTIONS

1. Research on paleoclimates and paleoenvironments

1.1. Paleoclimates from ice cores

1.2 Climate and environmental changes since the Last Glacial Maximum reflected in northern Russian lake sediments

1.3 Multi-proxy investigation of the palaeoenvironmental content of the Pleistocene marine isotope stages.

2. Research on sea ice

- ***2.1 Sea ice dynamics in conditions of rising air temperature***
- ***2.2 Impact of changing ice conditions on winter navigation in Polar Regions***

3. Atmospheric studies in the Polar Regions

- ***3.1: Changes in the large-scale atmospheric circulation over the Arctic Region***
- ***3.2: Structure of the atmospheric boundary layer***
- ***3.3: Teleconnections between climate variability in the Arctic region and northern Europe***

4. Biosystems adaptations and resilience under climate change scenarios

4.1 Decreasing resilience of polar coastal marine communities and potential implications for a warmer future

- ***4.2 Effects of climate change and human impact on the dynamics of arctic plant communities***
- ***4.3 Climate sensitivity of whole-lake metabolism in polar and boreal lakes***
- ***4.4 Climate-induced changes of microbial diversity and their functional role in catchments of polar lakes***

5. Social and Human research of Polar Regions

- ***5.1. Arctic Peoples' Subsistence Technologies, Adaptation Strategies and Religious Change***
- ***5.2 Historical polar expeditions and their effect on modern polar studies***
